Get the **edge** in pH with the latest innovation from Hanna

Just launched edge is the latest innovation from Hanna Instruments offering some of the most advanced technology for measuring pH, conductivity and dissolved oxygen.

Quite simply edge breaks new ground in electro chemistry. Combining the dimensions and format of a small digital tablet with high precision technology edge has been designed to make pH measurement simpler, quicker and more accurate. Cutting-edge design, capacitive touch buttons and an intuitive user interface come together to offer scientists worldwide the most innovative pH meter on the market.

How edge works:

edge measures pH, conductivity and dissolved oxygen through its unique digital electrodes. Auto-recognised they provide sensor type, calibration data and a serial number and connect to **edge** with an easy plug-in 3.5mm connector. Full measurement, configuration, calibration, diagnostics and logging data are quickly transferred to computer or USB drive.

Programmed for basic and advanced modes, **edge** has the ability to offer simplified screen features for routine measurements or detailed data display.

edge warns users if the electrode is not clean or if buffers are contaminated during calibration using the exclusive Hanna CAL-CHECK feature. Advancing this technology even further, **edge** will also warn you if the pH bulb is cracked or if the junction of the electrode is compromised.

With its versatile tablet design **edge** is equally at home in your hand, on a laboratory bench or mounted on a wall.

Key features:

- capacitive touch buttons
- large 140mm LCD display that can be viewed from over 5 meters distance
- clear full text readout
- programmed for basic and advanced modes
- two USB ports
- GLP data automatically transferred
- data logging up to 1000 records
- digital smart electrodes enable edge to automatically recognise and stores sensor type, ID and calibration information
- Hanna CAL-CHECK warns if electrode is not clean or buffers are contaminated
- fully-equipped with benchtop cradle and adjustable electrode holder
- The culmination of Hanna's vision, design capabilities and integrated production facilities, Hanna has set the new standard with edge.
